

The number game players can trust — and you can prove.

A drop-in, regulator-ready result engine for licensed operators. It closes the prediction exploit that drains incumbent products — and lets every player verify fairness themselves.

INCUMBENT-STYLE ENGINE

82% of rounds the exploit predicted

House: -23,600 / 300 rounds

Results derived from recoverable state — predictable, and drained by expert players.

SYLOX PROVABLY-FAIR ENGINE

8% predictor accuracy = pure chance

House: +5% steady hold

Result sealed by hash before bets, verifiable after. No edge left to exploit.

WHAT "PROVABLY FAIR" MEANS

● Committed before play

The result is sealed behind a published fingerprint before any bet is placed, so it cannot be changed once money is on the table.

● Verifiable after play

Every player recomputes the result on their own device and confirms it. Fairness is checked, never merely promised.

● Predictable to no one

Past results reveal nothing about the next, so the expert rings that bleed incumbent houses simply cannot form.

WHY IT MATTERS TO YOU

Compliance a mathematically verifiable fairness record for your regulator and auditor.

Player trust verifiable fairness keeps players in the room and spending.

Protected margin payouts priced to the true odds, so the house edge is never given away by accident.

Benchmark figures from a head-to-head simulation against a model of the predictable architecture used by incumbent products; the provably-fair side runs live cryptographic verification.
